Kehrmann, Johann August Ludwig Friedrich 1864 - 1929

DEGREE: PhD DATE: 1887 PLACE: Basel
TEACHER/RESEARCH ADVISOR: Nietzki

studied dyes, esp. derivatives of fluorindene and triphenylmethane; studied phosphotungstic acids and related species; investigated chemistry of quinones, oximes, azines, oxazines, thiazines, and quinomethanes; discovered first evidence of steric hindrance in aromatic substitution reactions; studied relationship between the color and chemical constitution of organic compounds.

3. Chem. Ber. 1929, 62, 60A.
